SUMMARY

Biomedical data scientist with more than 16 years of experience in multi-omics analysis, machine learning, and data analytics pipelines for computational oncology, immuno-oncology, drug discovery, and pediatric neurodevelopment. Integrates mutational, gene-expression, imaging, and clinical data to identify biomarkers of treatment response. Founded and ran a computational biology consultancy; co-inventor on three granted patents and three published applications; released five tools as open source, including a laboratory platform in use at three laboratories; led teams of 10 or more scientists. Author of 7 journal articles and 2 preprints with 150+ citations. Uses large language models (LLMs) and agentic coding tools to speed pipeline development, literature synthesis, and analysis.

TECHNICAL SKILLS

Bioinformatics and multi-omics: bulk RNA-seq, metabolomics, genomics; next-generation sequencing (NGS) analysis; variant analysis (SNVs, CNVs); pathway and cell-cell communication analysis; gene-set enrichment; clinical data integration (MRI, ultrasound, neurodevelopmental scores)

Modeling and machine learning: mechanistic network, ODE, and stochastic pathway models; scikit-learn, TensorFlow, Keras, PyTorch; generalized linear, mixed-effects, segmented, and survival models

Programming and infrastructure: Python, R, SQL, MATLAB, C/C++, Unix shell, JavaScript/TypeScript, PHP; Git, CI/CD, Docker and Singularity, Snakemake, LSF, AWS; database design; full-stack web development

Behavioral phenotyping: DeepLabCut, B-SOId, BONSAI, OpenCV, MediaPipe; three-chamber sociability and Erasmus Ladder analysis

AI-assisted research: large language models (LLMs) and agentic coding tools for analysis code, literature synthesis, and reproducibility checks

Clinical data and compliance: clinical and electronic health record (EHR) data management; removal of identifiers; research under approved Institutional Review Board (IRB) protocols; HIPAA and protected health information (PHI) handling; data-use agreements

EXPERIENCE

Research Technician (Bioinformatics)

Children's National Hospital, Washington, DC | 03/2025 - Present

- Kratimenos Lab, Sheikh Zayed Institute for Pediatric Surgical Innovation. Curate and quality-control de-identified clinical research datasets integrating electronic health record (EHR), imaging, laboratory, metabolomic, and transcriptomic data for two preterm-infant studies (178 and 181 infants).
- Perform statistical analyses relating clinical exposures to brain development, including more than 1,000 serial cranial ultrasound scans, using linear, mixed-effects, segmented, logistic, and modified Poisson models, with stratification and sensitivity analyses.
- Build and maintain reproducible RNA-seq pipelines for mouse and human cerebellar studies of prematurity insults, necrotizing enterocolitis, and sudden infant death syndrome; perform differential expression, pathway, and Gene Ontology (GO) enrichment analyses.
- Quantify rodent behavior with DeepLabCut and B-SOId in a mouse model of prematurity insults and its early-rehabilitation extension; develop statistical and machine-learning models on Erasmus Ladder data from 160 preterm mice.
- Develop reproducible figure code, verify manuscripts against deposited data, and prepare sequencing-data repository submissions; contributed cancer-immunology content and figures to a co-authored review (Frontiers in Immunology, 2025).

Founder and Lead Computational Biologist

Digirobi Solutions, Bengaluru, India | 09/2019 - 06/2022

- Founded and led an independent computational biology consultancy, delivering commercial and academic engagements in cancer therapeutics and research software.
- Built cancer genomics, drug, and nutrition databases for a nutrigenomics platform, and co-invented a cancer combination therapy covered by granted US and European patents.
- Built a mechanistic model of Src kinase signaling in neonatal hypoxic neuronal injury (MATLAB SimBiology), which resulted in a peer-reviewed paper (2022); designed and built MyVivarium, an open-source colony-management platform now used in three laboratories (published 2025).

Senior Lead Scientist

Cellworks Life, Bengaluru, India | 07/2007 - 09/2019

- Promoted through Associate Biomodeling Scientist (2007), Associate Lead Scientist (2008), Lead Scientist (2014), and Senior Lead Scientist (2017); mentored more than 25 junior scientists and delivered more than 25 internal training sessions.

- Led a team of more than 10 scientists developing computational precision-medicine platforms for oncology, and set the standards for model reproducibility and validation.
- Using TCGA, MSK-IMPACT, and proprietary genomic, transcriptomic, and pharmacological data, designed and validated patient-specific drug-response models across solid and hematologic cancers; in the Beat AML study, predicted sensitivity or resistance to a BET inhibitor agreed with the ex vivo IC50 classification for 93 of 100 acute myeloid leukemia (AML) patients (Leukemia Research, 2019).
- Built a cell-line resource (more than 500 lines with IC50 profiles), computational drug models for about 200 compounds, and more than 15 curated clinical datasets used to train, validate, and benchmark the models.
- Co-invented the PTEN/TP53-targeted cancer combination therapy (US 10,098,880 B2), drafting the claims and handling prosecution through examiner objections; contributed to two further patent applications.
- Built and validated an eight-cell-type systems biology model of rheumatoid arthritis against in vivo data and identified two synergistic repurposed drug combinations, one of which reduced disease progression in a murine arthritis model.

SELECTED TECHNICAL PROJECTS

- **MyVivarium:** cloud platform for lab-animal colony management with IoT sensing (PHP, MySQL, JavaScript); CSBJ 2025; in use at three laboratories; version 2 under staged deployment at the University of Dayton. Source: github.com/myvivarium/MyVivarium
- **enrichlite:** in-browser gene-set over-representation analysis (GO, Hallmark, Reactome), human and mouse. robinsonvidva.com/enrichlite
- **drugtargets:** drug-target exploration and repurposing tool on Open Targets and openFDA. drugtargets.robinsonvidva.com
- **DrugInteract:** client-side FDA drug-interaction reference on openFDA and RxNorm. robinsonvidva.com/DrugInteract
- **neokine:** client-side MediaPipe pose visualization with joint-angle, velocity, and asymmetry plots. robinsonvidva.com/neokine

EDUCATION

M.S., Data Analytics, Western Governors University, Salt Lake City, UT

07/2024 - 01/2025

M.B.A., Project Management, Sikkim Manipal University, India

11/2012 - 02/2020

B.Tech. (Bachelor of Technology), Biotechnology, Bharathidasan University, India; First Class with Distinction

07/2003 - 04/2007

PATENTS

- EP 3,861,992 B1 (2023) and US 11,478,444 B2 (2022), granted: plant-derived supplements combined with antineoplastic compounds for hematological malignancies.
- US 10,098,880 B2 (2018), granted: nelfinavir, metformin, and rosuvastatin combination for PTEN/TP53-aberrant cancers.
- US 2015/0302167 A1, US 2015/0098993 A1, US 2014/0127295 A1, published applications: therapeutic-development method; compositions for inflammatory disease.
