SUMMARY

Biomedical data scientist with 18 years of experience in multi-omics analysis, machine learning, and data analytics pipelines for computational oncology, immuno-oncology, drug discovery, and pediatric neurodevelopment. Work integrates mutational, gene-expression, imaging, and clinical data to identify biomarkers of treatment response and to link molecular pathways to clinical and behavioral outcomes. Independent and idea-driven: founded and ran a computational biology consultancy; co-invented six patents, three granted; built five open-source tools now used by other laboratories; led teams of 10 or more scientists while setting institutional standards for model validation. Works with large language models and agentic coding tools as a routine part of analysis, software development, and manuscript verification. Record: 7 peer-reviewed papers, 2 preprints, 14 conference abstracts, 6 patents, 150+ citations, 5 open-source tools.

RESEARCH FOCUS

Computational oncology and precision medicine: cancer genomics and NGS analysis; biomarkers of treatment response; patient-specific drug-response models and digital twins; drug repurposing and combination therapy design; hematologic malignancies, especially AML; cancer immunology.

Immunology and inflammatory disease: systems-biology models of macrophage, dendritic-cell, and T-cell signaling; mucosal and innate immunity; immune-modulating therapeutics; rheumatoid arthritis and inflammatory bowel disease.

Pediatric and neonatal translational research: multi-domain clinical data (MRI, ultrasound, growth, neurodevelopmental assessments); preterm brain injury and cerebellar development; neonatal hypoxic-ischemic injury; necrotizing enterocolitis; sudden infant death syndrome; behavioral phenotyping and early rehabilitation.

Open-source and AI-enabled research infrastructure: reproducible, LLM-assisted analysis and verification workflows; laboratory management platforms (MyVivarium); browser-based tools for enrichment analysis, drug-target exploration, drug interactions, and pose kinematics.

EDUCATION

M.S., Data Analytics

07/2024 – 01/2025

Western Governors University, Salt Lake City, UT

Capstone: Regression and clustering analysis of Seoul bike-sharing demand.

M.B.A., Project Management

11/2012 – 02/2020

Sikkim Manipal University (Distance Education), Gangtok, India

Project: A study on the importance of HRM in project management at Pathfinder Global Solutions.

B.Tech., Biotechnology, First Class with Distinction

07/2003 – 04/2007

Bharathidasan University, Tiruchirappalli, India

Project: Biochemical and microbiological analysis of dairy milk plant effluent.

RESEARCH AND PROFESSIONAL EXPERIENCE

Research Technician (Bioinformatics) | Children's National Hospital

03/2025 – Present

Kratimenos Lab, Sheikh Zayed Institute for Pediatric Surgical Innovation, Washington, DC

- Curate and quality-control multi-source clinical data sets for two preterm-infant cohort studies, integrating electronic health records, imaging, laboratory, metabolomic, and transcriptomic data into de-identified source-of-truth datasets for one study on cerebellar development after preterm birth (178 infants) and one on necrotizing enterocolitis and brain injury (181 infants).
- Perform statistical analyses relating clinical exposures to brain development in those cohorts using linear, mixed-effects, segmented, logistic, and modified Poisson models to evaluate cerebellar growth, MRI findings, and neurodevelopmental outcomes, with stratification and sensitivity analyses.
- Build and maintain reproducible RNA-seq pipelines for mouse and human cerebellar studies of prematurity insults, necrotizing enterocolitis, and sudden infant death syndrome; perform differential expression, pathway, and GO enrichment analyses with visualization.
- Quantify rodent behavior with DeepLabCut and B-SOiD in a mouse model of prematurity insults (maternal immune activation and neonatal hypoxia) and its early-rehabilitation extension; develop statistical and machine-learning models on Erasmus Ladder motor-coordination data from 160 preterm mice.
- Write reproducible figure and table code, verify final manuscripts against deposited data, prepare public-repository submissions of sequencing data, support manuscript preparation and revision, and contribute the cancer-immunology content and figures to a co-authored review on immune modulation in skin cancer (Frontiers in Immunology, 2025).

Career Transition and Professional Development

07/2022 – 02/2025

Bayonne, NJ

- Relocated from India to the United States for family reasons and used the period for full-time professional development in biomedical data science.
- Completed an accelerated M.S. in Data Analytics (WGU, 2024–2025) and advanced immunology certifications (Imperial College London, 2023).
- Expanded software engineering skills into full-stack web development, Linux server administration, and cloud deployment, later used to build the open-source tools.

Founder and Lead Computational Biologist | Digirobi Solutions

09/2019 – 06/2022

Bengaluru, Karnataka, India

- Founded and led an independent computational biology consultancy, delivering commercial and academic engagements in cancer therapeutics and research software.
- Built cancer genomics, drug, and nutrition databases from public and proprietary sources for a nutrigenomics platform, and co-invented the resulting nutraceutical combination therapy for cancer, granted in the United States and Europe.
- Built a mechanistic model of Src kinase signaling in neonatal hypoxic neuronal injury (MATLAB SimBiology, sensitivity analysis), which resulted in a peer-reviewed paper (2022).
- Designed and built MyVivarium, an open-source colony-management platform with IoT sensing, now used in three laboratories, and led its publication (2025).

Senior Lead Scientist | Cellworks Life

11/2017 – 09/2019

Bengaluru, Karnataka, India

- Led a team of more than 10 scientists developing computational precision-medicine platforms for oncology, and set the standards for model reproducibility and validation.
- Using TCGA, MSK-IMPACT, and proprietary genomic, transcriptomic, and pharmacological data, designed and validated patient-specific drug-response models across solid and hematologic cancers, reaching 80 percent or better correlation with experimental results and 93 percent accuracy among 100 AML patients in the BEAT AML consortium.
- Built the cell line resource (more than 500 lines with IC50 profiles) and the curated clinical data collections (more than 15) used to train, validate, and benchmark the models.

Lead Scientist | Cellworks Life

01/2014 – 10/2017

Bengaluru, Karnataka, India

- Built a knowledge base of about 200 compounds covering targets, mechanisms, pharmacokinetics, and resistance, then turned each into a simulatable drug model within the disease platform.
- Co-invented the PTEN/TP53-targeted cancer combination therapy (US 10,098,880 B2), drafting the claims and handling prosecution through examiner objections.
- Delivered more than 25 training sessions on topics related to computational biology, immunology, and data analytics, evaluated therapeutic candidates with pharmaceutical partners, and mentored junior scientists.

Associate Lead Scientist | Cellworks Life

06/2008 – 12/2013

Bengaluru, Karnataka, India

- Built and validated an eight-cell-type systems biology model of rheumatoid arthritis against in vivo data, identified two synergistic repurposed drug combinations, and showed one reduced disease progression in a murine collagen-induced arthritis model.
- Contributed to peer-reviewed work on inflammatory skin and oral mucosal disease with collaborators, and to two patent applications and American College of Rheumatology presentations.
- Established the company's quality standards for model development and validation.

Associate Biomodeling Scientist | Cellworks Life

07/2007 – 05/2008

Bengaluru, Karnataka, India

- Built mechanistic models of immune signaling in macrophages spanning more than 20 pathways and gene-regulatory networks, and designed the perturbation-based validation approach adopted across the modeling platform.

PATENTS

Granted

1. Vali S, Abbasi T, Stopka T, Minarik L, Singh NK, Usmani S, Radhakrishnan S, Sikora H, **Vidva R**, et al. Combination therapy comprising plant derived compounds and antineoplastic compounds for treatment of hematological malignancies. European Patent EP 3,861,992 B1, granted 2023 Sep 6 (Cannafamily AS). European counterpart of US 11,478,444 B2.

2. Vali S, Abbasi T, Stopka T, Minarik L, Singh NK, Usmani S, Radhakrishnan S, Sikora H, **Vidva R**, et al. Use of scientifically matched plant supplements combined with antineoplastic compounds for the treatment of hematological malignancies. US Patent 11,478,444 B2, granted 2022 Oct 25 (Brio Ventures LLC).
3. Vali S, Usmani S, Sultana Z, Kumar A, Abbasi T, **Vidva R**. Combination of nelfinavir, metformin and rosuvastatin for treating cancer caused by aberrations in PTEN/TP53. US Patent 10,098,880 B2, granted 2018 Oct 16 (Cell Works Group Inc.).

Published applications

4. Vali S, Abbasi T, Fernandes P, Rajagopalan S, Alam A, **Vidva R**, et al. System and method for development of therapeutic solutions. US Patent Application 2015/0302167 A1, published 2015 Oct 22 (Cell Works Group Inc.).
5. Vali S, **Vidva R**, Nair PR, Fernandes P, Abbasi T, Radhakrishnan S. Compositions, process of preparation of said compositions and method of treating inflammatory diseases. US Patent Application 2015/0098993 A1, published 2015 Apr 9 (Cell Works Group Inc.).
6. Vali S, **Vidva R**, Nair PR, Fernandes P, Abbasi T, Radhakrishnan S. Compositions, process of preparation of said compositions and method of treating inflammatory diseases. US Patent Application 2014/0127295 A1, published 2014 May 8 (Cellworks Research India Pvt Ltd; Cell Works Group Inc.).

TEACHING AND MENTORING

- Mentored more than 25 junior scientists and engineers at Cellworks Life and Digirobi Solutions, 2014–2022.
- Designed and delivered more than 25 internal training sessions on computational biology, data analytics, and modeling methods, 2014–2019.

PROFESSIONAL SERVICE AND MEMBERSHIPS

Membership: International Society for Computational Biology (ISCB), 2024–present

Open-source community: maintainer of public repositories at github.com/robinson-vidva; MyVivarium supports three external laboratories

TECHNICAL SKILLS

Programming: Python, R, SQL, MATLAB, C/C++, Unix shell, JavaScript/TypeScript, HTML/CSS, PHP

Bioinformatics and multi-omics: bulk and single-cell RNA-seq, spatial transcriptomics, metabolomics, genomics; NGS DNA and RNA analysis; variant analysis (SNV, CNV); pathway and cell-cell communication analysis; gene-set enrichment; integration of clinical datasets (MRI, ultrasound, neurodevelopmental scores)

Modeling and machine learning: mechanistic network models, ODE and stochastic pathway models, systems biology; scikit-learn, TensorFlow, Keras, PyTorch; generalized linear models, mixed-effects models, survival analysis

Behavioral phenotyping: DeepLabCut, B-SOID, BONSAI, OpenCV, MediaPipe; three-chamber sociability and Erasmus Ladder analysis; motor and gait phenotyping

Software engineering and infrastructure: full-stack web development; Git, GitHub, Jira; CI/CD; Snakemake; Docker and Singularity; database design; Linux server administration; LSF job scheduling; AWS; IoT integration for laboratory environments

AI-assisted research: large language models and agentic coding tools (Claude and similar) for analysis code, literature synthesis, reproducibility checks, and manuscript verification; prompt and workflow design; awareness of model limits and validation needs

Visualization: Tableau, matplotlib, seaborn, ggplot2; scientific reporting and dashboards

Clinical data and compliance: de-identified clinical and medical-record data under IRB-approved protocols; HIPAA and PHI handling; data-use agreements

Languages: English (fluent), Tamil (native)

CERTIFICATIONS

- Advanced Data Modeling, Data Analytics Fundamentals, and Data Preparation, Western Governors University, 2024–2025
- Immunology series: Innate Immune System, Adaptive Immune System, and Immune Failures and Cancer Immunology, Imperial College London (Coursera), 2023
- Fundamentals of Immunology: Complement, MHC I and II, T Cells, and Cytokines (2021) and Innate Immunity and B-Cell Function (2020), Rice University (Coursera)
